I don't see a suggestion box, so I suppose this should go here?

I often want to "print" a thread for offline study later. Every time I do that, I get a garbled mess. Could you maybe add a "print" button or something that would rectify that problem?

Thanks.

This has been debated for a long time. Back in 2015, @Greg Bernhardt had some plans I believe for a thread print feature:

Greg Bernhardt said: ⤴

I may be able to put something together. Anyone else interested in a thread print function?

@exmarine how are you printing the threads? In your browser try "Save page as PDF" for each page of a thread. What result are you getting?

So this will work for only a page at a time, but it may help format a page to print a little better.

Ok, I just use Windows browser, java script enabled, etc., so the equations show, and hit print pdf. I'll see if I can attach what I got this morning. It is a mess!

Testing...

$$v(t) = L \frac{di(t)}{dt}$$

$$i(t) = \frac{1}{L} \int v(t) dt$$

Okay, nevermind. I tried Select-All, Copy, Paste into Word, but that didn't work very well, and the LaTeX wasn't preserved. Plus all of the other stuff in the side-bar was included in the Select-All...

- Highlight/select the posts by dragging the mouse cursor over the area you want to print
- Press Ctrl-C to **copy** to clipboard
- Open a text editor
- **Paste** to the text area using Ctrl-V

You get the text, no formatting and no graphics. Here are the above two posts.

Yeah, not ideal, just a little less cluttered.

Cheers,

Tom
